

LEDDAR KYC / VERIFICATION POLICY

Effective Date: May 1, 2026

Version: v1.0.0.0

Platform: LEDDAR

Website: www.myleddar.com

Operator: Leddar Systems Limited

1. Purpose

This KYC / Verification Policy explains how LEDDAR verifies users, businesses, and selected account information to support trust, fraud prevention, payment readiness, compliance, and platform safety.

This Policy applies to all users of LEDDAR, including:

- Brands
- Artisans
- business representatives
- anyone applying to access restricted features of the platform

2. Why Verification Is Required

LEDDAR requires verification to:

- confirm that users are real and identifiable
- reduce fraud and impersonation
- improve trust between Brands and Artisans
- support secure payment and payout flows
- protect the platform from abuse
- meet operational and compliance standards
- support lawful cooperation with payment providers and verification providers

Verification is a condition for access to certain platform actions and is not merely optional platform information.

3. Legal and Compliance Context

LEDDAR processes verification information in line with applicable law and platform controls. Nigeria's data protection regime requires lawful, fair, and accountable processing of personal data, including sensitive personal data where relevant. The NDPA also provides rights to data subjects and imposes obligations on controllers and processors. ([Nigeria Data Protection Commission](#))

Where LEDDAR works with banks, payment providers, or verification vendors, additional KYC, fraud, or AML/CFT-related checks may apply through those regulated third parties. The CBN states that AML/CFT supervision in Nigeria is risk-based and that BVN strengthens KYC in the banking system. ([Central Bank of Nigeria](#))

4. Who Must Be Verified

Verification may apply differently depending on the user type and the action being taken.

4.1 Brands

Brands may be required to complete verification before they can:

- request production pricing
- request samples
- pay sample fees or deposits
- proceed to production
- receive certain platform approvals
- access higher-value or repeat transaction features

4.2 Artisans

Artisans may be required to complete verification before they can:

- be listed as eligible for work

- accept certain orders
- receive payouts
- access higher-value opportunities
- maintain or improve visibility on the platform

4.3 Representatives

Where a user acts on behalf of a company, LEDDAR may require verification of both:

- the individual representative
- the business entity

5. Verification Levels

LEDDAR may use a tiered verification model.

Level 0 — Basic Access

This may include:

- phone verification
- email verification
- account creation checks

This level may allow limited browsing or non-transactional use only.

Level 1 — Standard Verification

This may include:

- identity document submission
- business name or profile completion
- bank account details
- selfie or liveness check where required
- address or contact validation

This level may unlock core transactional functionality, subject to platform approval.

Level 2 — Enhanced Verification

This may include:

- deeper business review
- additional identity checks
- bank or payout verification
- transaction-risk checks
- manual review by LEDDAR or its provider

This level may apply to:

- higher-risk users
- large-volume accounts
- repeat or high-value production flows
- users flagged for additional review

6. Information We May Request

Depending on the user type, LEDDAR may request some or all of the following.

6.1 For Individuals

- full legal name
- date of birth
- phone number
- email address
- residential or business address
- government-issued ID
- selfie or face match image
- bank account details for payout readiness

6.2 For Businesses

- registered business name
- RC number or equivalent business identifier where applicable
- business address

- contact person details
- tax or registration information where applicable
- proof of authority to act for the business
- bank account details

6.3 For Artisans

- full name
- artisan or workshop name
- production category
- location
- ID details
- bank account details
- examples of past work
- capacity or specialization information

7. Acceptable Verification Documents

LEDDAR may accept one or more of the following, subject to review and provider availability:

- National Identification Number-related documents or other government ID
- international passport
- driver's licence
- voter card
- business registration documents
- proof of bank account ownership
- utility bill or proof of address where necessary
- BVN-linked verification support where relevant through payment or banking providers

The exact acceptable documents may change from time to time depending on legal, operational, provider, or fraud requirements.

8. Verification Providers

LEDGAR may use third-party providers to support:

- identity verification
- document authentication
- liveness checks
- bank account validation
- fraud screening
- payment-linked checks

By using the platform, you authorize LEDGAR to share relevant verification data with such providers as reasonably necessary for verification, compliance, fraud prevention, and secure platform operations.

9. How Verification Works

The general process may include:

1. account setup
2. submission of required information
3. document upload
4. automated checks where available
5. manual review where needed
6. approval, rejection, or request for additional information

Verification outcomes may include:

- approved
- pending review
- more information required
- failed
- rejected
- suspended for further review

10. Manual Review and Enhanced Checks

LEDGAR may require manual review where:

- document quality is poor
- records do not match
- fraud indicators are present
- names are inconsistent
- multiple accounts appear linked
- the account is high-risk
- the transaction value or pattern justifies additional scrutiny

Manual review does not guarantee approval and may take longer than automated review.

11. Platform Consequences of Verification Status

Your verification status affects your access to the platform.

If you are not verified, LEDDAR may:

- limit visibility of your profile
- block access to payments or payouts
- prevent sample or production requests
- prevent order acceptance
- restrict use of selected features
- pause transactions pending review

If verification is approved, LEDDAR may:

- unlock account features
- allow pricing requests, production flows, or payouts
- improve visibility or platform standing where relevant

If verification fails or is rejected, LEDDAR may:

- request corrected documents
- keep your account restricted
- suspend or terminate access
- refuse future applications where justified

12. False, Misleading, or Fraudulent Information

You must not submit false, manipulated, borrowed, or misleading verification information.

If LEDDAR reasonably believes that information is false, fraudulent, altered, stolen, or misleading, LEDDAR may:

- reject the verification
- suspend the account
- cancel pending workflows
- block payouts
- retain records for compliance and fraud prevention
- report the matter to relevant providers or authorities where legally required

13. Re-Verification

LEDDAR may require re-verification at any time where reasonably necessary, including where:

- your information changes
- your account behavior changes
- a provider requires fresh validation
- fraud risk increases
- legal or regulatory changes occur
- account inactivity is prolonged
- a payout or transaction requires additional checks

14. Bank Account and Payout Verification

Where Artisans or other users are eligible for payout, LEDDAR may require verification of:

- account name
- account number
- bank
- bank ownership match

- payout eligibility status

LEDDAR may refuse payout where account details are invalid, mismatched, suspicious, or incomplete.

15. Timing and Service Expectations

Verification timing may vary depending on:

- completeness of information
- provider performance
- system availability
- queue volume
- manual review needs
- fraud screening outcomes

LEDDAR does not guarantee instant verification.

Indicative processing times, where shown on the platform, are estimates only.

16. Data Protection and Security

Verification data often includes sensitive personal data. Nigeria's NDPA sets out rules on processing sensitive personal data, lawful bases, security, and data subject rights. ([Nigeria Data Protection Commission](#))

LEDDAR takes reasonable steps to protect verification information, including:

- access controls
- role-based permissions
- restricted internal visibility
- secure storage arrangements
- vendor controls
- confidentiality obligations

Verification data will only be accessed by personnel or vendors who need it for legitimate platform, compliance, or fraud-prevention purposes.

17. Retention of Verification Data

LEDGAR may retain verification records for as long as reasonably necessary for:

- compliance
- fraud prevention
- dispute handling
- legal defense
- platform safety
- audit trails
- support of transaction and payout history

Even if an account is closed, some verification-related information may be retained where necessary for legal, operational, or risk reasons.

18. User Rights

Subject to applicable law and platform obligations, you may request to:

- access your personal data
- correct inaccurate information
- update records
- object to or restrict certain processing
- request deletion where legally available
- withdraw consent where consent was the basis of processing

Some requests may be limited where LEDGAR must retain data for compliance, security, legal defense, fraud prevention, or transaction history reasons.

19. Sharing of Verification Data

LEDGAR may share verification-related data only where reasonably necessary, including with:

- KYC vendors
- payment processors
- banking or payout partners

- fraud detection tools
- legal authorities where required by law
- courts, regulators, or law enforcement where lawfully required

LEDDAR does not sell verification data.

20. Cross-Border Processing

Where verification vendors or infrastructure are located outside Nigeria, verification data may be processed cross-border. The NDPA regulates cross-border data transfers and requires appropriate legal bases and safeguards. ([Nigeria Data Protection Commission](#))

By using LEDDAR, you acknowledge that such cross-border processing may occur where reasonably necessary for secure and effective verification.

21. No Guarantee of Platform Approval

Verification does not guarantee:

- work opportunities
- quote approval
- production approval
- payout approval in every case
- long-term account standing

Verification only confirms that LEDDAR has accepted the submitted information at the relevant point in time, subject to continuing compliance and platform rules.

22. Changes to This Policy

LEDDAR may update this KYC / Verification Policy from time to time.

Where material changes are made, LEDDAR may notify users through the platform, by email, or by other reasonable means.

Continued use of the platform after such update means you accept the revised policy.
