

LEDDAR PAYMENT, REFUND & CANCELLATION POLICY

Policy governing fees, payment timing, tranche release, cancellations, reversals, and refunds

Operator	Leddar Systems Limited
Applies to	Brands and Artisans using LEDDAR
Version	v1.0
Status	Public-facing policy

Policy intent

- Make payment expectations clear before money changes hands.
- Reduce confusion around deposits, sample fees, tranche releases, and non-refundable costs.
- Protect trust on both sides by connecting payment to workflow milestones.

1. Payment model

- LEDDAR facilitates payment through licensed third-party providers.
- Platform economics currently assume a 30% take rate on eligible production transactions.
- Brand-side fee: 20% within the order flow.
- Artisan-side fee: 10% deducted from artisan-side transaction economics.
- Current production payout structure: 35% to commence production and 35% on completion, subject to workflow conditions.

2. Payment types

Payment type	When due	Purpose
Sample fee	Before sample work starts	Covers sample workflow and sample production readiness.
Production commencement payment	Before full production starts	Unlocks first production tranche and job activation.
Balance / completion payment	At completion stage	Closes out the order and unlocks final settlement.
Additional charges	As approved	Applies to revisions, scope changes, urgent delivery, taxes, or other approved extras.

3. When work may start

- No sample begins until the sample fee is confirmed.
- No production begins until the applicable quote is accepted, verification requirements are met, and the required payment has cleared.
- LEDDAR may pause or delay work where payment is pending, reversed, failed, or under review.

4. Sample fees

- Sample fees are paid upfront.
- Sample fees may be deductible from full production pricing only where the sample workflow or quote expressly says so.
- Unless expressly stated otherwise, sample fees are non-refundable once sample work has started or sample resources have been committed.

5. Production payments and tranche release

Stage	Payment handling rule
Before commencement	Brand-side payment must be confirmed before first production tranche is released.
During production	LEDDAR may monitor milestone updates before allowing further workflow progression.
On completion	Final settlement depends on completion conditions, quality review, and any required approval.
Failed or reversed payment	LEDDAR may pause the order, delay payout, or reverse workflow status where lawfully permitted.

6. Cancellation by a Brand

Cancellation point	Refund position
Before sample or production work starts	Refund may be available, less payment charges or non-refundable administrative fees where disclosed.
After sample work starts	Sample fee is ordinarily non-refundable.
After production starts	Amounts already committed to work, labour, materials, or platform processing may remain payable.
After completion or delivery	Refund is not automatic and depends on documented defect or policy-approved exception.

7. Cancellation by an Artisan

- An artisan must not cancel accepted work without valid reason.
- If an artisan cancels after commencement, LEDDAR may reassign the work, pause payout, apply account sanctions, or offset losses where permitted.
- Any customer refund or remediation will depend on the facts, the stage of work, and the platform workflow.

8. Scope changes and price revisions

- A change in design, quantity, materials, branding, finishing, or timeline may trigger a revised quote or new charges.
- A request for correction is not the same as a full redesign.
- LEDDAR may pause work until revised scope, price, and timing are accepted.

9. Refund rules

- Refunds are assessed case by case and only where supported by the workflow, the facts, and applicable policy.
- Refunds are not guaranteed merely because a buyer changes mind after work has started.
- Payment processing charges, committed material cost, labour already performed, and clearly disclosed platform charges may be deducted from any approved refund.
- Where a refund is approved, timing depends on payment provider processing cycles.

10. Chargebacks and disputed payments

- If a payment is charged back, reversed, or disputed with a payment provider, LEDDAR may immediately pause the related workflow.
- LEDDAR may request evidence from both sides and preserve records while the issue is reviewed.
- Users must cooperate in good faith with any payment investigation.

11. Non-refundable items

- Sample fees after sample work starts
- Production costs already incurred
- Approved scope-change costs already committed
- Payment processor fees where non-recoverable
- Other specifically disclosed non-refundable items

12. Operational timelines

- Refund review target: within 5 business days of receiving complete information.
- Approved refund processing target: within 5-15 business days, subject to payment provider timelines.
- Payment issues affecting active production are treated as priority cases.

13. Contact and escalation

Questions about invoices, payments, refunds, or cancellations should first be raised through official LEDDAR support channels. Users should not rely on informal chat as the sole record for a financial claim.
